

ECO GREENHOUSE HEATER

ECO GREENHOUSE HEATER

Safe, low energy protection for your plants

Hylite Eco Greenhouse Heaters are one of the most energy efficient ways of providing low-cost ambient heating and frost protection in greenhouses, cold frames, sheds, garages and conservatories - using less electricity than a fan heater and being a cleaner alternative to paraffin heaters.

Their IP55 compliance ensures a hose and sprinkle resistance that makes them safe to use in all growing environments - including grow tents.

Features:

- **Safe, low cost alternative to an electric fan heater** - and cleaner than a paraffin heater
- **IP55 rating for water resistance** - means the heater is unaffected if sprinkled with water when watering plants
- **Available in 2 sizes** - with a 4ft heater recommended for a 6 x 8 greenhouse and the smaller 2ft heater recommended for smaller greenhouses and lean-tos
- **Supplied ready to use** - with floor standing brackets and 2m cable with heavy duty UK plug
- **Manufactured in high quality seamless tube** - with easy-clean, green enamel finish
- **Automatic heat sensitive cut-out**
- **Fully CE certified** - and BS EN 60335/1:2002 compliant
